

# Data Insights at Your Fingertips

Tap into conversational analytics that turn BigQuery data into immediate business answers. While most AI tools are limited to simple queries, we build agents that allow your team to ask questions and get answers grounded in your data.

## The Challenge

Pulling insights from your data takes too long. Non-technical leaders have to wait days for a data analyst to write a query, and your technical teams spend too much time responding to basic, repetitive requests.

You need to democratize your data without compromising security or accuracy.

## The Solution

In **just seven weeks**, the Data Navigator Agent (DNA) delivers a secure, conversational interface that translates natural language into precise insights.

- **Empower everyone** with data-backed insights
- **Reclaim capacity** for strategic work
- **Maintain control** over PII
- **Own your infrastructure** foundation

## Built for Production, Not Just Proof-of-Concept

Every agent we build is designed to meet three non-negotiable criteria:

### Connected

Seamlessly plugged into your enterprise systems and Gemini-ready.

### Instrumented

Wired from day one to track performance, accuracy, and cost.

### Managed

Version control and lifecycle management support continuous evolution.

## What's Included

### A Safe AI Foundation

AI access stays inside your environment, using only approved data.

### Natural Language to SQL Engine

Direct integration with your BigQuery environment.

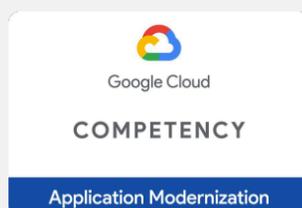

### Implementation and Training

Full technical documentation and comprehensive training session.

## Built on Google Cloud

Delivered on Google Cloud using Gemini for Enterprise, cloud-native security, and scalable infrastructure aligned with Google best practices.
